

- To find your Place Latitude and Longitude head over <<https://www.latlong.net/>> .
- If you don't know **what is SMTP** is and how to **find the SMTP mail server** for an email address then, Go, to browser search it.

Important:

So as long as you have your computer ON and this is running, then you can run this for a whole 24 hours. And I'll bet you at some point in the night, you'll get two or three emails telling you that the ISS is overhead. So, all you have to monitor is just to switch your notifications on your phone and when that email comes in to look up into the sky and I hope that you're going to be able to spot the ISS tonight. If you do, take a video and let us know what it looks like.
